

ScheduLINK®

Scheduling solutions for transmission management

Let us help you concentrate on your big picture. We simplify the management of your complex satellite and/or terrestrial contribution capacity, including bandwidth, media-centric services and operations. Our smart technology will find time in your business where previously there was none.

ScheduLINK helps to avoid potential problems such as restricted availability, equipment incompatibility, antenna port and look-angle conflicts, single and dual-path polarity conflicts, insufficient setup / move time and exceeded bandwidth capacity.

The advanced transmission management capabilities enable fast, collaborative and informed decision-making. ScheduLINK delivers integrated tools that allocate capacity, configure and validate satellite and fiber transmissions, manage complex inventories and avoid bandwidth conflicts and double bookings.

How it works

By leveraging the optional ScheduALL Chorus™ interoperability platform, ScheduLINK provides a two-way interface to third-party systems for external equipment control, transmission status and alerts, and much more.

ScheduLINK provides comprehensive cost center allocations, automated pricing, cancellation rate cards and invoicing capabilities. These features provide detailed business analysis and reporting capabilities that interface with external ERP systems.

These tools present detailed business analysis and reporting capabilities that interface with external ERP systems.

Heightened visibility of vendor resources, cost rate cards, automated purchase order creation and vendor goodnight notifications, as well as integrated trouble ticketing, are just a few more reasons that this is the system of choice for comprehensive management and cost control.

Key features

- Bandwidth capacity management
- Antenna, satellite and fiber, IRDs, truck and personnel control
- Automated or manually guided selection of transmission paths, transponder channels and associated equipment
- Dynamic visual display of paths and transponder bandplans
- Transmission validation via pre-defined technical feed parameters
- Fully-integrated accounting tools
- Event-based alerts and notifications

Benefits

Advanced resource management offers heightened visibility of vendor resources, automated purchase order creation and vendor goodnight notifications.

- Increases efficiencies by eliminating bandwidth allocation conflicts
- Evaluates elements in a satellite or terrestrial network transmission
- Eliminates mistakes assembling satellite and terrestrial transmissions
- Improves rate of collection with automatic invoice creation
- Enforces crucial operation center actions
- Provides proactive feed alerts
