ScheduALL Implementation

Realize maximum ROI with expert setup

Net Insight's Professional Services team possesses the expertise to help you get total control over your workflow to optimize your resources and drive efficiencies. Whether scheduling production facilities or transmission feeds, our Professional Services team provides you with the deep product knowledge and real world expertise to lead you through every step of an implementation.

The ScheduALL Project Managers and Implementation Managers are a team of media experts that deliver customized solutions for your scheduling system. From the workflow analysis and design phase, continuing through the implementation process, our approach will ensure maximum ROI.

Net Insight utilizes a proven methodology, derived from our extensive experience, including over 500 implementations. Our team quickly identifies your requirements and improves them with our industry knowledge to create a custom designed, cost-efficient system for you.

ScheduALL Implementation overview

In preparation for implementing your ScheduALL solution, we document your requirements and offer workflow reccomendations, based on industry experience from organizations of all shapes and sizes. Our aim is to ensure your implementation is as lean and efficient as it can be according to your needs, current business and process. ScheduALL will be configured, setup and installed, and we will train users and administrators before the go-live of your system. Finally, we will have a hand over to our support team to answer any questions you may have.

ScheduALL Implementation steps

Discovery — Our team of experts will assess workflows, including business and technological drivers that motivate a ScheduALL system implementation or update. With industry best-practices in mind, you will get a custom designed solution. We hold workshops or interviews to gather your requirements and provide you with a proposed solution; including the various ScheduALL modules, and any integrations or migrations if applicable.

CUSTOMER BENEFITS

- Maximize your investment by adding true industry expertise to the implementation
- Minimize the time to launch with our proven project methodology
- Learn how to setup ScheduALL and use the system in your own environment

System Implementation — Our Project Managers provide expert guidance to create your implementation plan designed to meet your scope and timeline. The plan will include setup, configuration, and personalized user training Once developed, the Project Manager will work together with your team to deliver the solution, either onsite or remotely. The ScheduALL Implementation includes training and assistance through to system acceptance, and can continue all the way to your go-live phase.

Advanced Implementation — *Integration* — Third-party integration can be managed with the ScheduALL Chorus module. Our implementation team will facilitate automation with industry standard APIs. *Migration* — We can assist you with migration of data from other systems. Assessment and reccomendations will be based on the volume and cleanliness of your data. *Reports* — ScheduALL implementations come with a set of high quality reports. If you require additional reports, our team can help build them in Crystal or SSRS.

Training
ScheduALL Implementation includes two types of training woven into the project and timeline.
User training — We will train your staff to address all daily activities and teach best practices for system optimization.
Administrator training — Focus on in-depth technical details about your custom ScheduALL setup, including database admin and overall system setup.
