

Professional Service

Planning, configuring, integrating and optimizing your synchronization network

Our team of experts working in Professional Services Sync assists our customers in planning their synchronization network deployment, and is available for helping out with configuration and calibration of the Nimbra and Zyntai TimeNodes and Director including integration towards existing network and management systems. Net Insight's professional service team can also help with audits and optimization of your synchronization network.

Network Planning

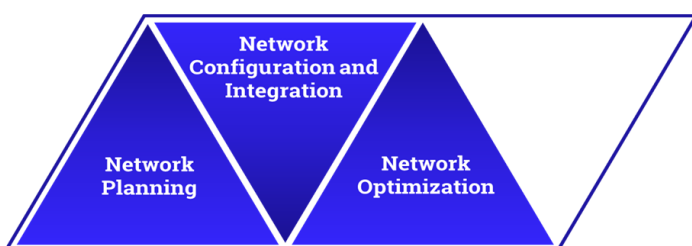

Help you plan your deployment of synchronization functions in 5G and mission critical network. Establishing best topology, address plans, redundancy options before starting deployment of your synchronization network.

Network Configuration and Integration

- Our experts can help you with configuration of our TimeNodes and also configuration and set up of Zyntai Director.
- We also help planning and performing integration towards your existing management, alarm and performance systems.

Network Optimization

- Our experts perform audit of your synchronization architecture and set up and help in optimizing equipment and network topologies for optimal performance and reliability.

Benefits

- With in-depth knowledge and experience of planning large 5G and mission critical synchronization networks – we help you accelerate rollout and secure service reliability and availability.
- With experienced project management, we secure both configuration and integration of all parts of your network related to synchronization, operation and network management.
- By correct synchronization calibration, we assure that your network is supported with state-of-art accurate timing.
- Our experience in audits and optimization will help secure your RoI
